

Universal clamp

In everyday life of laboratories open vessels are used in which different instruments are placed. Usually for every instrument a tripod, pipe coupling and clamp is needed. Therefore a practicable solution is wanted, which

- fixes more than one instrument quickly and at the same time
- clamps instruments at the rim of vessel
- affords a secure and fast installation
- is light and handy

The laboratory universal clamp allows a fast, trouble-free and secure fixing of multiple laboratory instruments like thermometers, test-tubes, electrodes, tubes etc. at the rim of open vessels.
